

Snap-on Diagnostic Certification

Train the Trainer

Snap-on is committed to ensuring that not only professional users of Snap-on Diagnostics are trained in proper application, but also educators across the country will be prepared and confident in disseminating this information to future technicians.

Train-the-Trainer will teach you how to incorporate certification training into your curriculum or workplace. This three-day training introduces the full power of Snap-on diagnostic tools. In addition to becoming certified, the training provides:

- An overview of Snap-on's philosophy and commitment to education
- A working lunch with Snap-on representatives
- A discussion of teaching methods and suggestions on how to integrate Snap-on Diagnostics certification into your existing program

Diagnostic Tools

The diagnostic tools incorporated in the Technician Certification and the Train the Trainer program are:

ETHOS™: The quick go-to scan tool that complements the Snap-on family of scan tools. It is ideal for an entry-level technician, a service advisor, or a top-tech who wants quick answers to tough problems.

SOLUS PRO™: The next step in the evolution of the Snap-on Scanner™. This tool communicates with the onboard computers to read and clear trouble codes, verify input readings, and simulate outputs on today's advanced computer-controlled systems.

MODIS™: The all-in-one flagship of the Snap-on Diagnostic family. It combines, multiplies and exceeds the power of Vantage PRO and SOLUS PRO together into one unit. Its 4-channel lab scope, power graphing meter, component-test meter, scanner and more make it the most advanced diagnostic tool in the industry.

CERTIFICATION CENTER

Certification for the Center

Snap-on partner schools are authorized Snap-on Certification Centers.

- Helps with recruitment and retention by using the "brand" Snap-on
- Promotes life long learning
- Advances career goals
- Improves quality of education
- Enhance student recruitment

Technician Certification

The capabilities of diagnostic tools change to meet these needs and technicians need to have the skills necessary to operate and understand them. Certification raises the level of excellence for all in the industry which assures vehicle owners and potential employers of technicians that the technician has the skill sets to repair computer-controlled vehicles successfully.

Upon completion of training on Snap-on Diagnostic products and after passing the rigorous test, users are considered a power user of Snap-on diagnostic tools with an efficiency of 90-100%.

Become one of the first automotive professionals in the country to hold this certification. Achieve master status (top 10% nationwide) and be one of the most sought after technicians in the field.

Snap-on certification is available for each of the three diagnostic tools.

- ETHOS™: 4 hr class
- SOLUS PRO™: 8 hr class
- MODIS™: 8 hr class
